The following is an examiner's statement of reasons for allowance: The prior art of record does not teach nor render obvious the instantly claimed invention. There is no teaching in the art to

Art Unit: 1792

perform the process that is now claimed. The prior art does not teach forming a polycrystalline gallium-containing nitride feedstock from a metallic gallium feedstock in a supercritical ammonia-containing solvent with addition of a mineralizer, comprising: forming a polycrystalline gallium-containing nitride feedstock from a metallic gallium feedstock placed in a crystallization zone in which at least one seed is placed, suppressing convection and chemical transport between the dissolution zone and the crystallization zone and by reacting the metallic gallium feedstock with a supercritical ammonia-containing solvent; and crystallizing a gallium-containing nitride by gradual dissolution of the polycrystalline gallium-containing nitride feedstock by evoking convection and chemical transport and by selective crystallization of gallium-containing nitride on at least one seed to obtain a bulk-monocrystalline gallium-containing nitride, as stated in the instant invention. There is no motivation in the art to change the prior art's teaching to arrive at the instantly claimed process.
